

# CUSTOMER NOTICE OF WATER RATIONING

**Date: July 23, 2026**

**To: Customers of South Grayson Special Utility District**

Due to the extreme temperatures and lack of expected rainfall, the District is requesting all customers to reduce landscape watering to **once** per week.

Therefore, under our Drought Contingency and Emergency Water Demand Management Plan on file with the Texas Commission on Environmental Quality, **Stage 1 – Mild Conditions** – Allocations will begin on July 27th, 2026 and will be in effect no later than 30 days or until the situation improves.

Stage 1 allocation restricts your water use as follows:

**Limit landscape watering with sprinklers and irrigation systems to once per week and between the hours of 10pm to 7am. Extending the water supply during drought conditions is crucial to meeting the water needs of all customers and will help prevent moving to a more restricted stage. Hand watering with a shut off nozzle is allowed anytime and does not apply to the once per week restriction.**

The SGSUD Board has authorized those penalties and measures contained in the SGSUD District's Service Policy that may be levied against you and placed on your account(s) if you are found violating this allocation. Subsequent violations may result in temporary termination of service. If you feel you have good cause for a variance from this rationing program, please contact us in writing at the address above. A complete copy of our approved Drought Contingency and Emergency Water Demand Management Plan is available for review at our business office. A copy may be obtained for standard copying charges.

Thank you for your cooperation,

Bobby Clay, General Manager SGSUD
